ALIGNMENTS

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNN and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NoII site
and the oligo-dT track served to identify it as a clone from the
normalized testis library cDNA tibrary Preparation: M.B. Soares Lab
Clone distribution: clones will be available through Research
Seq primer: Mi3 Forward

[5'-(GA)IO-ACTAGTCTGAGTTTTTTTTTTTTTT-7:] and directionally
cloned using 5' linkers 5'-AATTGGGAGGAG-3' and
5'-CTGGTGCG-3'. Size selection of >400bp material gives
average insert size ranging from 1-2 kb. Library was mass
excised (from lambda-UniAAP-XR) and resulting
single-stranded phagemids were prepped and tranformed
into DH10B. Library contains 98:3% recombinants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ă
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 29, Application US/09103663D
Patent No. 6771803
GENERAL INFORMATION:
TATLE OF INVENTION: Isolation, characterization, and use of the human beta
TITLE OF INVENTION: Isolation, characterization, and use of the human beta
TITLE OF INVENTION: subunit of the high affinity receptor for
TITLE OF INVENTION: immunoglobulin E.
TITLE OF INVENTION: immunoglobulin E.
TITLE OF INVENTION: MUMBER: US/09/103,663D
CURRENT FILING DATE: 1998-06-23
EARLIER APPLICATION NUMBER: 07/869,933
EARLIER PILING DATE: 1992-04-16
NUMBER OF SEQ ID NOS: 35
SOFTWARE: PATENTIN VET. 2.1
SEQ ID NO 29
LENGTH: 243
TITLE PATENTING DATE: 1998-06-26
SERVINEM: Homo sapiens
US-09-103-663-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ë,
                                                                                                                                                                                                                                                                                                          3;

ACCUMULATION OF THE ANTIBIOTIC IN WHOLE CELLS. THIS PROTEIN FUNCTIONS AS A METAL-TETRACYCLINE/H+ ANTIPORTER.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO THE MAJOR FACILITATOR FAMILY (ALSO KNOWN AS THE DRUG RESISTANCE TRANSLOCASE FAMILY).
                                                                                                                                                                                                                                                                                                                                                                                                      ic resistance; Transmembrane; Transport; Symport; Plasmid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              284 KDVHQLSTAEIGSVIIFPGTMSVIIFGYIGGILVDRRGPLYVLNIGVTFLSVSF 337

J. Biol. Chem. 272:9268-9274(1997).

I. Sid. Chem. 272:9268-9274(1997).

Subcritor: INVOLVED IN MARIEX ASSEMBLY (BY SIMILARITY).

Subccellular LOCATION: Secreted.

I. TISSUE SPECIFICITY: DETECTED IN A VARIETY OF ORGANS, INCLUDING CALVARIA, UTERGY, HEART, AND BRAIN, AS WELL AS FIBROBLAST AND GSTEOBLAST CELL LIRES.

SIMILARITY: CONTAINS 10 EGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 2 VWFA DOMAINS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
